Subject: Risk evaluation in Fruitvale field

Hi David and Clay,

I had a call earlier today with John Borkovich on another topic, but we discussed the two facilities in the Fruitvale field – Alon and San Joaquin Refinery. To confirm - the Water Board did not do a risk screening evaluation for these injection wells that are regulated by WDRs rather than DOGGR Class II permits because what we had asked was focused on the Class II well inventory in CA. However, yesterday, DOGGR presented the Fruitvale AE package to the Water Board, and there was a comprehensive water supply well survey done by the operator. Water Board has not verified or reviewed the information presented, but all supply wells are in a much shallower formation than the formation proposed for exemption. I let John know that we were close to issuing a letter on Alon and that they would be receiving a copy. Please let me know if you have any questions.

Thanks,

Michele
